322 Compilers Assignment: spill
Register allocation: spilling

Due Monday April 11th, noon

Your job: Implement spilling. See the spill-test assignment for details on how the spilling script should behave.

Handin instructions: Your scripts must run on the t-lab machines (under linux).

Hand in your assignment by sending email with the subject `spill` to `robby@eecs.northwestern.edu`. The email should include a `.tar.gz` attachment that contains (at the top-level) the `spill` executable.

The top-level directory can also contain executables that correspond to earlier assignments; they will be re-run in the test fest for this week.
